

Calculating Your Life Path Number Correctly

Your Life Path Number = the sum of the month, day and year and reducing this sum to a single digit or master number.

- 1) Add up the digits in your MONTH (if your month is made up of more than one digit)
- 2) Add up the digits in your DAY.
- 3) Add up the digits in your YEAR of birth.
- 4) Add up the answers from (1, 2 & 3) above.

With all of the above calculations we keep adding until we end up with a single number, or an 11 or 22 which are master numbers and don't get reduced to a single digit.

For Example:

March 25th, 1959

The MONTH is a 3 so it remains a single number.

The day is 25 so we add $2+5=7$ for our DAY number.

The year is 1959 so we add $1 + 9 + 5 + 9 = 24$ We then add the $2 + 4 = 6$ for our YEAR number.

The totals here are now $3 + 7 + 6 = 16$ Reduce 16 to $1+6=7$

Our Life Path Number in this case is #7.

Note: It is important to break each number down individually by Month, Day & Year.

*Notice what can happen if we don't break down our numbers individually.

March 12th, 1940

Done properly this equation would look like this....

$3 + 3 (1+2) + 5 = 11$ Life Path Number = 11 which is a very important Master Number.

Done incorrectly this equation could look like this....

$3 + 1 + 2 + 1 + 9 + 4 = 20$ Break this down to $2+0 = 2$

Done this way would miss the power and information of the master number. It's a common mistake so be careful with this. 😊
